## SUMMARY

High-achieving Computer Science undergraduate at FAST-NUCES with strong foundations in data structures, algorithms, and systems programming. Hands-on experience in AI, NLP, and Retrieval-Augmented Generation (RAG) systems, alongside full-stack and system design projects. Proven leadership experience and a strong academic record. Seeking AI/ML, NLP, or Software Engineering internships and research opportunities.

## EXPERIENCE

2025 – Present

Location

**SOFTEC, Head Ceremonies**

- Leading and managing the Ceremonies Team for Pakistan's largest university technology festivals
- Developing strong leadership and crisis handling-skills.

09/2024 – Present

Lahore, Pakistan

**SOFTEC, Deputy Conferences**

IT Extravanganza of FAST-NUCES, Lahore

- Assisted in organizing and coordinating conferences and workshops for a large-scale university tech event, with a focus on logistics, scheduling, and speaker coordination.

2020 – 2021

Lahore, Pakistan

**Beaconhouse College Programme, Johar Town Campus, Publication Head**

- Led and managed the production of the campus magazine, overseeing content creation, editing, and design.
- Enhanced communication and collaboration skills while working with faculty, students, and external contributors

## EDUCATION

01/2023 – Present

**Bachelor of Science - BS, Computer Science,**

*National University of Computer and Emerging Sciences*

CGPA 3.87 / 4.0

2020 – 2022

**Advanced Level, Beaconhouse College Programme, Johar Town Campus**

CGPA 4.0/4.0

2019 – 2020

**Ordinary Level, Beaconhouse Valencia Town Campus, Lahore**

CGPA 4.0/4.0

|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2025 | <b>ViaNova</b> , <i>NLP-Based RAG Travel Assistant</i><br>Designed a RAG-based travel recommendation system with semantic vector retrieval, bilingual Urdu-English support, speech-to-text input, and an evaluation-first backend to compare RAG and non-RAG outputs for reliability.                                                               |
| 2025 | <b>Pawdopt</b> , <i>Scalable Cat Adoption Platform</i><br>Designed and developed a full-stack pet adoption and post-adoption care platform following Software Design and Architecture principles, with a focus on modularity, scalability, and maintainability, and real-world workflow modeling with extensibility for AI-powered recommendations. |
| 2025 | <b>Online Grocery Store</b><br>Used React and Node.js to create functional application with styled components using CSS                                                                                                                                                                                                                             |
| 2024 | <b>Social Network Clone</b><br>Built a minimal Facebook clone in C++ with features like user authentication, friend requests, and a news feed with Simple UI.                                                                                                                                                                                       |
| 2024 | <b>Alphabet Catcher Game</b><br>Programmed in Assembly Language to build logical thinking and implemented interrupt handling and multitasking.                                                                                                                                                                                                      |
| 2024 | <b>Complaint Management System</b><br>Developed a Complaint Management System using various data structures and hashing for efficient storage, retrieval, and resolution tracking, ensured Scalability.                                                                                                                                             |
| 2024 | <b>Solitaire Game</b><br>Developed a Solitaire game in C++ with a basic UI, utilizing data structures like doubly linked lists and stacks. Focused on implementing game logic and optimizing performance.                                                                                                                                           |
